

Focus Quick Service Restaurant Management Solutions

Increase Speed of Service and Boost Revenue

Fast and efficient service is crucial to the success of quick service restaurants. Quick service restaurants require a POS system that can move customers in and out smoothly, without the hassle of long lines and order errors. Getting the customer experience right the first time is essential for good customer retention rates, and for quick service restaurants that boils down to speed of service and order accuracy.

Focus for quick service restaurants was designed with quick service in mind. It empowers restaurant operators to monitor and reduce the time it takes to serve each customer. Conversational ordering and order confirmation features increase the speed of service by guiding employees through quick, easy conversations with customers to ensure order accuracy.

Easily manage multiple revenue centers, including the counter and the drive-thru window, on any POS terminal in the store so that both lines are kept moving. Send orders from the POS system to the kitchen printers or kitchen display systems to streamline order preparation. Monitor your business by running real-time reports to monitor cash shortages, inventory shrinkage, comps, and voids.
